<p>(54) Title: NOVEL THERAPEUTIC MOLECULES AND USES THEREFOR</p>		
<p>(57) Abstract  The present invention relates generally to novel molecules capable of, <i>inter alia</i>, controlling cellular functional activity such as proliferation, differentiation and/or transcriptional regulation and to genetic sequences encoding same. More particularly, the present invention relates to novel members of the ETS family of proteins, referred to herein as "ELF5", and to genetic sequences encoding same. The molecules of the present invention are useful, for example, in therapy, diagnosis, antibody generation and as a screening tool for agents capable of modulating transcriptional events during cellular functioning such as in tumorigenesis.</p>
